

LINEA

Unique line

Experience, tradition, innovation.
More than 75 years of expertise
in shaping energy.

Linea. The design of a perfect Line.

A new series featuring an unprecedented and elegant design, which brings together the understated allure of sophisticated styling with state-of-the-art technology.

PATENTED
VIMAR

Linea brings together innovation and tradition, thanks also to multiple patents registered to make it truly one of a kind.

Essential and intuitive.

With Linea, we have redesigned energy.
The result is a new design with understated
shapes and a distinctive profile that makes it
truly unique.

Dynamic.

Linea is also digital, thanks to the innovative XT platform, a high-tech experience for the automated home.

**The research for absolute planarity:
slim thickness and flat surface.**

Accurate and sensitive interaction.

A special finish, devised specifically and achieved using laser processing, makes the surface enjoyable to touch for an enhanced sensory experience.

Sophisticated design.

Painstaking research and in-depth studies into design have given rise to a perfectly flat surface.

A gentle and harmonious Linea.

The unique shape of the aligned control.

Starting with a sophisticated planarity, the gently curved profile of the control creates a light protrusion, making it easy to find with your fingers.

Controls that are always aligned.

Once activated, the control resumes its original position, guaranteeing perfect alignment at all times thanks to our patented In-line technology.

Perfectly flat surface of the axial control.

Large control surface thanks to the increased height of the button and the possibility of pressing any part of the surface. Precise and silent kinematic mechanism.

Slim profile.

New patented reduced-depth controls make Linea extremely slimline. The unprecedented ergonomic shapes make it slender and lightweight, perfect on any wall.

XT platform: an enhanced user experience.

Absolute planarity of controls.

Innovative styling of the home automation system controls, extreme ease of use and ergonomic design across the entire surface.

Sensitive precision and delightful to touch.

Thanks to the special finish of the controls and to the new activation mechanisms, which stand out for their precision, silent operation and impeccable feedback.

Modular and scalable to suit any need.

The devices in the XT platform are scalable in time and extremely easy to use: from a simple control for lights and roller shutters, to temperature management and even the activation of scenarios to a home automation system that is always up-to-date and functional.

**Matching styling.
For everyday elegance
at your fingertips.**

Perfect results in any interior design.

Understated, flat design from the lighting device to the socket outlet, which thus feature perfectly matching styling to blend in seamlessly with any setting.

**Attention to detail, impeccable finish and
state-of-the-art technology.**

Linea with XT platform ensures impeccable matching styling by incorporating all the desired functions into the interior design, for any domestic taste.

Lighting with vertical light beam.

The control with a patented vertical light beam creates a soft glow on the surface of the cover plate: the result is a discrete yet distinctive effect on the wall.

Elegantly curved controls that are always aligned.

1.

Exclusive shape with a gentle, minimally protruding curvature.

2.

Once activated, the control resumes its original position, guaranteeing perfect alignment at all times thanks to patented In-line technology.

3.

Maximum user-friendliness, thanks to the 53 mm size of the control and its slight protrusion.

4.

Two different lighting possibilities: the stylish square or a vertical beam of light in the dedicated button.

Perfect planarity and precise operation of axial controls.

1.

Absolute planarity effect: the control remains perfectly aligned with the surface of the cover plate.

2.

Generously-sized 53 mm button which can be operated across the entire surface.

3.

Control with patented mechanism which stands out for its kinematic precision and requires minimal pressure to be activated.

4.

Sophisticated light details. In the axial control, the distinctive illuminated mark identifies its function in the dark.

The XT platform: user-friendly, expandable and dynamic.

1.

Innovative styling with controls across the entire surface and activation with micro-switch with flawless feedback; understated, flat design and extremely user-friendly.

2.

Extensive scalability and expandability of controls. You can move the front to other control devices in one simple move, without having to adjust any wiring.

3.

Controls with proximity sensor: they are activated when tapped, providing a gentle confirmation feedback.

4.

Controls with sensitive precision, pleasant to touch, ergonomically designed and activated across the whole surface.

The XT platform, home automation naturally.

The transformation of the home automation system functions is easy and scalable over time in one simple move. Choosing between the different types of available controls with the XT platform, the 1-way switch can easily be composed and configured, ready for any requirement.

You can move the elements and configure the interfaces to create self-explanatory controls with dynamic LED symbols, making the device extremely user-friendly.

Increasing the functions on the same lighting device is an advantage both during installation as well as for renovations, without the need for any masonry work, thus accommodating all needs in time.

All the home automation functions can be managed using the View App, with which the system can be remote controlled via smartphone/tablet.

Flat, perfectly matching design.

One unique style for all functions.

Painstaking pursuit of absolute flatness between all the elements of the lighting device and between different lighting devices. We have flattened what wasn't flat before: universal flush-fitting socket outlets with a patented recessed anti-jamming mechanism which guarantees functionality at every use and for every type of plug. Impeccable operation!

Linea and XT platform with control device and socket outlet device: perfectly matching all functions.

Impeccable coordination for an identity that stands out every time.

Understated and contemporary design and the pursuit of natural appeal have been interpreted by the neutral colour shades, which are growing in popularity in modern homes, creating welcoming atmospheres and easily accommodating various styles.

Pure, bright white brings to mind simple, open spaces; canvas is a warm and natural hue while black draws its inspiration from mineral materials, for settings with a bold personality.

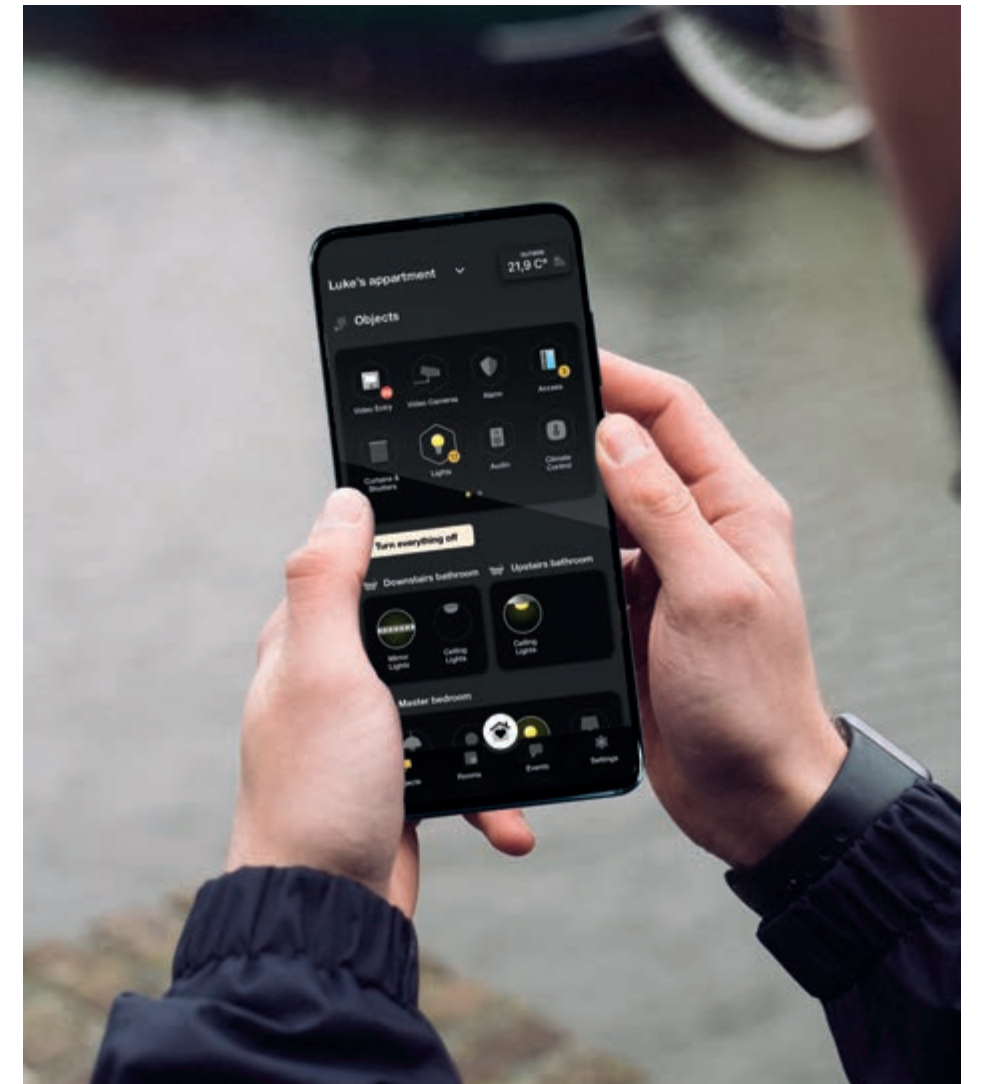

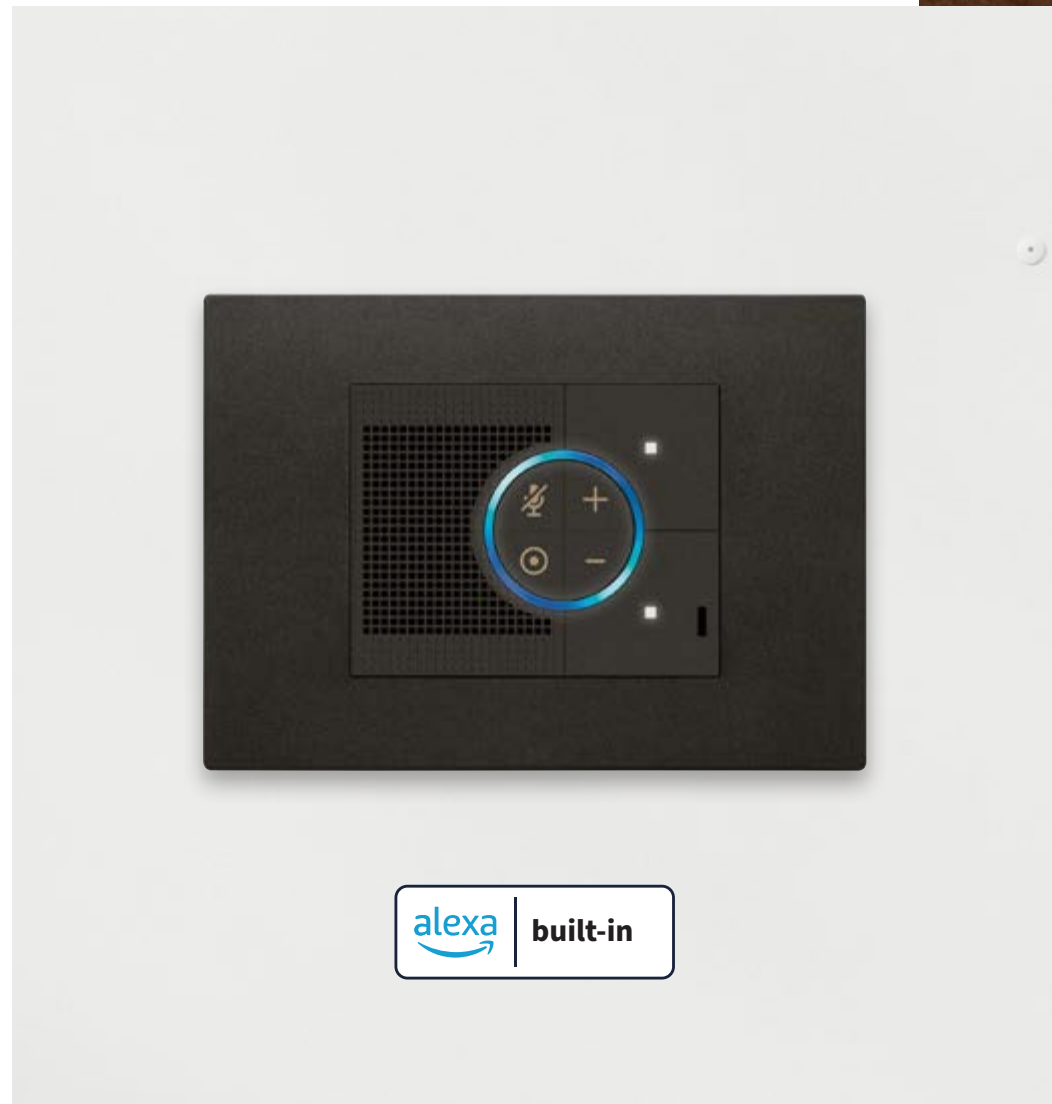

Living in a perfectly connected and integrated world.

With smart systems, home automation systems and over 200 functions to meet the needs for comfort, energy efficiency and safety of contemporary life.

The home simply becomes smart.

Everything is under control via app or voice.

Thanks to the **View Wireless** system, you can control and even remote manage lights, roller shutters, the temperature in every room, accesses and energy consumption too. Greater comfort, efficiency and safety within the home and outside it too.

The connected wiring system is the ideal solution for refurbishments, to boost the functions of an existing system or in the event of a new system installation. Update spaces simply, no work required. The connected home improves life for its inhabitants.

Home automation and building automation system.

Linea and the XT platform: two different designs for a perfectly coordinated and matching home automation system.

By-me Plus is the automation system which allows you to control lights, temperature, sound system, curtain and roller shutter automation, sprinkler system, energy management, multi-zone temperature and scenario control. Perfectly integrated with video door entry, burglar alarm and video surveillance systems, By-me Plus offers the utmost comfort, energy efficiency and superior safety in both home and office environments.

Flexible, interoperable and modular, **Well-contact Plus** is the system developed on the **KNX standard**, for complete building management. Whether in small or large hotels, offices, multi-purpose centres or even gyms, Well-contact Plus is the solution that provides constant control and management of lights, temperature, security, energy and accesses, providing functionality and comfort in every single environment.

Multiple functions thanks to Linea and the XT platform.

Over 200 functions to design a complete system with the utmost ease.

Functions key

- | | | |
|---|--|--|
| 1. Name plate push button and burglar alarm system actuator | 4. Controls compatible with various types of system: traditional, advanced and connected | 7. Controls with XT platform with customised labels |
| 2. Radar sensor and smart dial thermostat | 5. Home automation controls | 8. Controls with XT platform with dynamic LED matrix |
| 3. IoT connected actuator and universal socket outlet with type C USB | 6. Ringtone/buzzer with patent and auxiliary emergency removable hand lamp and controllable step marker lamp | 9. Thermostat and control with XT platform |

Highly versatile modular system.

Extremely flexible installation, also perfect for application in the hospitality industry and offices.

Functions key

- | | | |
|--|---|--|
| 1. Control for 2-module mounting box, between 1 and 12 programmable functions | 4. Room status signalling unit and bell | 7. Access point, Bpresa socket outlet, USB A+C TV socket outlets with 2 outputs, HDMI and RJ45 |
| 2. Control for 3-module mounting box, between 1 and 16 programmable functions | 5. DND/Make Up Room switch and transponder pocket | 8. 30 W USB socket outlet and universal flush-fitting socket outlet on table mounting box with adjustable height |
| 3. Controls for 4-module mounting box, between 1 and 20 programmable functions | 6. Auxiliary emergency and controllable step marker lamp, temperature probe and IR detector | |

Attention to detail to give rise to bespoke projects.

Highly customisable controls to enhance the value of the project identity. An extensive range of symbols are available, to offer you the chance to customise environments and enhance the value of the facility's identity, whatever the facility.

- 1. To enhance the value of an accommodation facility's identity, the cover plates can be engraved with the customer's own logo; laser technology ensures the symbols are clear and accurate.
- 2. Customised laser-engraved symbols, text and pictograms. Each customisation is reproduced in detail for lasting results and a further enhanced user experience.
- 3. For even more sophisticated solutions, controls and functions can be painted in the same colour as the painted technopolymer cover plates: silver, clay and metal - for the total look effect.

- 4. Laser-engraved graphic icons contained in a comprehensive and broad library of symbols, which allow you to identify the desired function.
- 5. Dynamic LED icons which can be customised using the View App. Possibility of smart backlighting with white light set to various brightness levels as you prefer.

Finishes, colours and materials for the home scenarios of today and tomorrow.

A range of carefully selected finishes.

Linea offers a range of cover plates designed to add value to any environment with a discrete style, paying particular attention to the choice of materials, including zinc-titanium alloy cover plates to obtain PVD finishes, with prestigious, eco-sustainable metallic effects.

Total look.

Linea is designed to be sustainable.

Our commitment to the future.

Eco-packaging

All Linea packaging is fully recyclable. Product cases, enclosures and boxes are made of recycled cardboard or card, printed with water-based ink. The paper used is FSC certified, which guarantees it is sourced from responsibly managed forests.

Finishing process for PVD (Physical Vapour Deposition) metal cover plates

Painstaking care taken with the choice of materials, including zinc-titanium alloy cover plates to achieve PVD finishes with prestigious, eco-sustainable metallic effects. One of the Linea series' many patents.

Products assessed according to the LCA approach

The painting process only uses water-based or UV-reticulating paints for an extremely low solvent emission into the atmosphere. We assess the environmental performance of Vimar's high-turnover products according to the LCA (Life Cycle Assessment) approach, with respect to the international reference standards ISO 14040 and 14044.

PEP **ecopassport®**, we certify the results by obtaining the related EPDs (Environmental Product Declarations).

Renewable energy

For the supervision and analysis of energy consumption levels in our plants, we have adopted the logic of smart metering. Our new logistics and production pole has been fitted with an open-circuit geothermal system, 3000 square metres of biodynamic cement panels, while the roof of the building has been planted with Sedum green affording greater thermal insulation and covered with 2,442 photovoltaic modules. These design choices show sustainability, architectural value and occupational comfort expressed to the full.
